

Project : Lead Qualification & Notification Automation System

Overview:

Built an automated lead management workflow using n8n that collects customer information, evaluates lead quality, stores data, and sends automatic email notifications.

Tools Used:

- n8n Automation Platform
- Google Forms / n8n Form Trigger
- Google Sheets
- Gmail Integration
- Conditional Logic (IF Node)

Workflow:

- User submits lead information through an online form.
- n8n receives the submission automatically.
- Lead information is evaluated using qualification rules.
- Qualified leads are stored in a dedicated Google Sheet.
- Low priority leads are stored separately.
- Gmail notifications are sent automatically based on lead category.

Features:

Automated lead collection
Lead qualification system
Separate handling of qualified and low priority leads
Google Sheets database management
Automatic email notifications
No manual data entry required

Skills Demonstrated:

- Workflow Automation

- Business Process Automation
- API Integration
- Data Management
- Conditional Logic
- SaaS Tool Integration

Project Result:

Successfully created an end-to-end automated lead processing system where form submissions are classified, stored, and notified automatically.
